Ekomille: the natural fight against mice and rats.

› Effective

Ekomille is an effective system of catching mice and rats ecologically, assuring hygiene and safety. Years of study and research into the ethology of rodents has resulted in a totally natural system.

› Works simply

The animal is attracted by the smell of natural feeds and is instantly captured as soon as it tries to eat by activating the sensitive mechanism, allowing continuous and multiple captures.

› Ecological, safe & hygienic

Ekomille does not use poisons or harmful substances - only natural feeds ensuring the safety of children and non-target animals. Containing the captured rodents it ensures hygiene in the environment. Disposal of the carcasses should be according to local regulations.

› Prevention & monitoring

The Ekomille product range provides a comprehensive solution to rodent control. It is effective for prevention, monitoring, eradication and the maintenance of a healthy environment.

› Minimal servicing

By design Ekomille requires minimal servicing. The external capture counter makes monitoring quick and simple. Specific accessories for removing carcasses ensure disposal is simple and hygienic.

› Versatile

Ekomille can be located internally or externally, on the floor or suspended. Specific accessories allow protection from vandals. It can be discreetly positioned for urban aesthetics.

› Certificates & recommendations

- Ekomille has been tested and recognized suitable by:
